Nikita Krivosheyev

Senior Frontend Developer

Astana, Kazakhstan · +7 701 604-56-47 · nik.krivosheyev@gmail.com · t.me/Kniser · krivosheyev.dev

Frontend developer with 5+ years of commercial experience. Worked both in teams of up to 20 people and as the sole engineer on a product: over the past eighteen months I took three SaaS products from an empty repository to production, covering architecture, backend and deployment. I focus on stateful interfaces where correctness is hard to maintain: real-time chats over WebSocket, content and workflow builders, admin panels with role-based access, analytics dashboards. Experienced in establishing frontend architecture (Feature-Sliced Design, Turborepo monorepos) on codebases of 35–40k lines.

TECH STACK

Frontend	TypeScript · React 19 / 18 · Next.js 15/16 (App Router, SSR/RSC) · Redux Toolkit · RTK Query · TanStack Query v5 · Tailwind CSS 4 · shadcn/ui · Radix UI · Mantine · CSS Modules · react-hook-form · Zod · TipTap · Recharts · WebSocket · Vite
Testing	Jest · Vitest · Cypress · Playwright — unit tests for business logic and utilities, e2e coverage of key user flows
Backend	PostgreSQL (schema design, RLS policies, SQL migrations) · Supabase (Edge Functions on Deno, Auth, Storage, Realtime) · Node.js · REST
Infrastructure	Docker · GitLab CI · Vercel · Sentry · Turborepo · Feature-Sliced Design · Conventional Commits · ESLint / Prettier / Husky · code review · Scrum

PROFESSIONAL EXPERIENCE

Galamat Tech

December 2022 — August 2026

Lead Frontend Developer · Almaty, Kazakhstan (on-site, later remote)

SaaS products and custom client platforms. Grew from team developer to lead; on recent projects acted as the sole engineer responsible for the entire product. Regularly ran 2–3 projects in parallel. Performed code reviews and owned adherence to architectural conventions across the team.

Traction — SaaS for team goal management

March — August 2026

Full-stack, sole developer

React 18 · TypeScript · Vite · TanStack Query v5 · PostgreSQL · Supabase · Tailwind

- Rewrote core modules of an AI-generated codebase and established a Feature-Sliced Design architecture (~35,000 lines) with enforced import direction and explicit module boundaries.
- Implemented the product surface: kanban board, roadmap timeline, weekly report editor with autosave, OKR sections, dashboards; server state on TanStack Query with optimistic updates and rollback.
- Diagnosed and eliminated autosave race conditions and data loss: binding responses to entities, flushing on tab close, an offline queue and version history.

Media Analytics Platform

May — June 2026

Full-stack, sole developer

Next.js 16 · React 19 · TypeScript · PostgreSQL · Supabase · Deno · Anthropic Claude

- Delivered the product end to end — from database schema and ingestion pipeline to UI and deployment.
- Built an asynchronous processing pipeline on pgmq and pg_cron: each stage (language detection, sentiment, NER, embeddings, clustering) runs as a separate queue with its own worker and a shared dead-letter queue.
- Implemented clustering of mentions into storylines via embedding similarity, plus near-duplicate detection to keep metrics clean.
- Built an AI assistant on Vercel AI SDK and Claude with a registry of domain tools, response streaming and prompt caching.
- Designed the PostgreSQL schema with RLS policies, 11 Edge Functions on Deno, and a six-screen frontend with live updates over Realtime subscriptions.

InstFarm v2 — multi-account Instagram management

January — April 2026

Full-stack, sole developer

React 18 · TypeScript (strict) · Vite 6 · TanStack Query · WebCodecs API · PostgreSQL

- Rebuilt the second version of the product from scratch on top of an AI-generated legacy codebase.
- Implemented in-browser video rendering with the WebCodecs API: demux → decode → Canvas overlay compositing → encode, with a decode-once optimisation (a single decode produces N personalised variants) and a MediaRecorder fallback for Safari.
- Built a bulk publishing pipeline with concurrency limiting against Instagram API rate limits, per-account progress reporting and partial-failure handling.

— Developed an analytics module: Instagram Insights collection in batches of up to 2,000 links, engagement-rate calculation, period comparison, CSV and PDF export.

Chatera — AI agent platform for messengers

March — December 2025

Sole frontend developer · 1,225 of 1,264 project commits

Next.js 15 · React 19 · TypeScript · Redux Toolkit · RTK Query · WebSocket · Tailwind 4

— Designed and built the entire client from scratch — repository architecture, production features and the marketing landing page.

— Implemented real-time chat over WebSocket: optimistic sending with pending / sent / error states, deduplication of incoming messages, infinite conversation loading.

— Designed an extensible scenario builder around an ActionRegistry pattern — new action types (handover to operator, deal creation in amoCRM and Bitrix24, arbitrary HTTP requests) plug in without touching the core.

— Built channel integrations (Telegram, WhatsApp via Green API with QR authentication, Instagram), AI agent configuration and tiered billing.

Sabaq Online — school education platform

January 2024 — March 2025

Lead frontend contributor (55% of commits) · team of 6

Next.js · TypeScript · RTK Query · Turborepo · CKEditor 5 · S3 · G-Core Streaming

— Designed the architecture of two applications in a Turborepo monorepo following Feature-Sliced Design, with shared packages enabling code reuse between the student area and the admin panel; agreed conventions with the team and enforced them in code review.

— Built the student area (courses, lessons, quizzes, XP-based gamification, subscriptions) and a role-based admin panel: drag-and-drop course builder, WYSIWYG editors with mathematical formula support, performance dashboards.

— Implemented a media upload module with direct-to-S3 uploads and video delivery via G-Core Streaming, including progress and cancellation. Platform shipped to production.

Leonardo LMS — distance learning platform

May 2023 — April 2024

Frontend developer · team of 8 · 791 of 2,016 commits

Next.js 13 · React 18 · TypeScript · RTK Query · Mantine · Turborepo · Zoom SDK

— Developed the instructor and student applications in a monorepo; contributed to adopting Feature-Sliced Design (~39,000 lines) on an existing codebase within an eight-person team.

— Built the learning content editor (tree-structured courses with drag-and-drop, TipTap WYSIWYG, assignments with instructor grading), an RBAC permission system and Zoom Meeting SDK integration for in-app webinars.

— Worked in Scrum: sprint planning, grooming, retrospectives, collaboration with QA and the product team.

Other company projects

— Dauys Chat Bots — chatbot builder SaaS, team of 20+ (2024–2025): bot analytics on Recharts, end-to-end payment flow, Instagram, WhatsApp and Bitrix24 integrations.

— HRCM — B2B HR assessment platform (2023; 2025–2026): analytics section, PDF report generation; brought back to refactor authentication — cookie-based tokens, Next.js middleware, silent token refresh guarded by a mutex to prevent refresh races across parallel requests.

— Chatera Admin — internal admin panel for the chatbot platform (2024): built from scratch, 76% of commits, Next.js 14 App Router, billing and subscriptions, direct-to-S3 uploads via signed URLs.

Independent projects

March — December 2022

Fullstack Developer · team of 5

JavaScript · React · Redux · Material UI · Node.js · Express · PostgreSQL · Socket.io

— Furniture e-commerce store and a watch brand landing page: React interfaces, client- and server-side authentication, a seller CRM with order tracking, API endpoints and database schema design.

Kazaeronavigatsia — State Air Navigation Enterprise

November 2020 — March 2022

Frontend Developer

JavaScript · React SSR · Bootstrap · Node.js · Express · PostgreSQL · Sequelize

— Flight statistics collection and reporting system: user interface, client- and server-side authentication.

EDUCATION & LANGUAGES

Tomsk State University — Faculty of Radiophysics, Laser Engineering and Laser Technologies

Russian — native · English — B1: confident reading technical documentation and written communication; actively developing spoken fluency
